GW.h	gigawatt hours

Note: Components may not add to total due to rounding.

PREFACE

The Alberta Statistical Review, Quarterly presents a comprehensive summary of social and economic information pertaining to the province of Alberta. The statistical tables and graphs provide both historical and current data at provincial and sub-provincial levels. Many tables also include comparisons between Canada and the provinces.

This edition is arranged into eleven subject areas supplemented by a glossary detailing definitions of terms and concepts. A brief narrative analysis is also included which highlights interesting trends occurring in the Alberta economy.

The statistics presented in this publication are compiled from a variety of sources including Statistics Canada, federal and provincial government departments and the Alberta Bureau of Statistics. Selected data are also available on ASIST (Alberta Statistical Information System), a computerized public data base maintained by the Alberta Bureau of Statistics. Access information is footnoted on the appropriate tables.

SUMMARY AND HIGHLIGHTS
OF MAJOR ECONOMIC INDICATORS

HIGHLIGHTS

-On 1-Jul-85, Alberta's **population** was 2,349,100, representing the third consecutive quarterly increase in growth. At 3,600, **net outflow** from the province was higher than during the previous quarter (2,200), a normal seasonal pattern. The loss was offset by a natural increase of 8,000 and net international migration of 600, resulting in a net quarterly population gain of 5,000.

-At \$57.6 billion, the preliminary estimate of Alberta's **1984 Gross Domestic Product** in current dollars grew 5.2 percent over 1983. In real terms (discounting the effects of inflation), this was an increase of 1.2 percent, representing a reversal in the declining trend experienced during the previous two years. The improvement originated primarily in an increased trade surplus as exports rose and imports fell. Individual and government consumption expenditures remained fairly stable while expenditures in construction and machinery and equipment declined for the third consecutive year.

-Since 1981, Alberta total **personal income** has steadily grown, but the rate of increase has decelerated from 23.7 percent in 1981 to 4.5 percent in 1983. In 1984, income totalled \$35,995 million, up 4.4 percent over 1983. This compares to a 7.4 percent increase for Canada. At \$15,841, Ontario had the highest per capita income in Canada. Yukon/N.W.T. followed at \$15,611 and Alberta ranked third at \$15,376. The Canada figure was \$14,412.

-During Sep-85, Edmonton and Calgary continued to record low consumer price changes as the **Consumer Price Indexes** rose 2.7 percent and 2.8 percent over Sep-84, respectively. These were the lowest year-over-year increases among the cities for which CPI's are produced. The latest monthly increases in both cities were partially attributable to higher charges for gasoline, owned accommodation, clothing and tuition fees. Since mid-1984, year-over-year increases in the national index have stabilized near 4.0 percent. The Sep-85 index rose 4.1 percent.

-The demand for consumer goods in Alberta continues to remain above 1984 levels. **Retail sales (unadjusted)** rose during Aug-85 to total \$1,186 million, up 20.1 percent over Aug-84. This was the largest increase among the provinces and was significantly higher than the increase for Canada at 12.6 percent. Notable gains occurred in sales from used car dealers (154.1 percent), motor vehicle dealers (49.1 percent), specialty shoe stores (39.2 percent), women's clothing stores (34.5 percent) and department stores (10.5 percent). At \$8,517 million, cumulative sales for 1985 were up 13.2 percent over the same period in 1984. Alberta per capita sales at \$505 in Aug-85, were the highest in Canada. Nova Scotia ranked second at \$466, followed by Ontario at \$454, while Canada's figure was \$439.

-Since Feb-85, Alberta's **unemployment rate (unadjusted)** has gradually declined to 8.6 percent in Sep-85. This compares to 11.2 percent in Sep-84 and is the lowest recorded rate since Aug-82. Analysis of rates by industry groups indicate that compared to Sep-84, only agriculture and finance/real estate registered increases. The largest drop occurred in the construction industry (from 24.0 percent to 14.3 percent). The national unemployment rate, at 9.3 percent in Sep-85, maintained its downward trend which began in Apr-85.

NOTE: THE ESTIMATED VALUE OF MANUFACTURING SHIPMENTS DATA ARE NOW BASED ON THE 1980 STANDARD INDUSTRIAL CLASSIFICATION (SIC), REPLACING THE 1970 SIC. AS A RESULT, DATA HAVE BEEN REVISED BACK TO JAN-81 AND ESTIMATES ON A 1980 SIC BASIS ARE AT SLIGHTLY DIFFERENT LEVELS. DATA WILL NOT BE DIRECTLY COMPARABLE WHERE CHANGES HAVE OCCURRED BETWEEN THE 1970 AND 1980 SIC.

(1) TOTALS INCLUDE ESTIMATES FOR SEVERAL INDUSTRY GROUPS WHICH CANNOT BE SHOWN SEPARATELY DUE TO CONFIDENTIALITY PROVISIONS OF THE STATISTICS ACT.

GLOSSARY

GLOSSARY

ASIST

ASIST (Alberta Statistical Information System) is a publicly accessible on-line information system for the retrieval, manipulation and dissemination of socio-economic data. ASIST has been developed in response to an ever-increasing need for a single source of timely and reliable information, which is readily accessible to businesses, government departments and agencies and the general public.

ASIST contains current and historical statistical information on a wide range of subjects including population, energy, trade and commerce, prices, manufacturing, finance and construction. In general, this statistical information focuses on Alberta and its various geographical areas. The Alberta Bureau of Statistics is solely responsible for co-ordinating the entry, maintenance and updating of all data within ASIST. Where applicable, ASIST matrix numbers have been provided at the bottom of tables. As well, many of the other statistical series presented in this publication are available on the Cansim Mini-base and can be retrieved through ASIST.

AVERAGE WEEKLY EARNINGS

Average weekly earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc. This includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentives, cost of living and other bonuses, payments to persons absent with pay in the survey reference week and overtime earnings (all pay received for the number of hours worked in excess of the standard workday or workweek). The payroll concept does not include supplementary labour costs.

All employees include salaried employees, employees paid by the hour and those employees whose basic remuneration is in the form of commission, piece rates, mileage allowances, etc.

Effective Apr-83, amendments were made to the survey used in collecting this data. Major alterations include:

- 1) The inclusion of firms of all sizes rather than only those with 20 or more employees.
- 2) The Industrial Composite concept has been expanded. The new Industrial Aggregate is now the sum of all industries with the exception of agriculture, fishing and trapping, religious organizations, private households and military personnel. (The old Industrial Composite excluded the same as well as education, health and welfare services and public administration.)

Due to these changes in survey methodology, data from the new survey are not comparable with those previously produced. To ease the transition period, Statistics Canada will continue to publish a compatible series of monthly Industrial Composite data for Canada and the provinces terminating with the production of Dec-85 data. This is a synthetic series, using the new survey data to approximate the old survey Composite.

BANK RATE

The Bank Rate is the minimum rate at which the Bank of Canada makes short-term advances to the chartered banks or to savings banks governed by the Quebec Savings Bank Act and after 1-Dec-80, to all members of the Canadian Payments Association. Data shown are for the last Wednesday in the reference month.

BUILDING PERMITS

Residential Building Permits - Number of Dwelling Units Created

1) Single

Refers to structures containing only one dwelling unit completely separated from any other dwelling or structure.

2) Cottages

Refers to seasonal dwellings such as summer homes and house-boats.

3) Double

Refers to dwellings found in structures containing two dwelling units such as duplexes and semi-detached dwellings.

4) Row

Refers to one-family dwellings in a structure of three or more attached dwellings.

5) Apartments

Refers to all multiple housing with three or more units such as triplexes, quadruplexes, row duplexes as well as apartments proper. Flats which are part of a non-residential structure are also included.

6) Conversions

Refers to dwelling units added by conversion of existing structures.

Residential Building Permits - Value

Value of building permits issued for residential construction including residential garages, swimming pools, alterations and improvements.

Non-Residential Building Permits

Value of building permits issued for new construction, alterations and improvements for industrial, commercial, institutional and government construction.

1) Industrial Building Permits

Includes buildings used for manufacturing and processing; transportation, communication and other utilities; agriculture; forestry; and mine and mine mill buildings.

2) Commercial Building Permits

Includes stores, warehouses, garages, office buildings, theatres, hotels, funeral parlours, beauty salons and miscellaneous commercial - signs, posters, heating and plumbing installations, etc.

3) Institutional and Government Building Permits

Includes expenditures made by the community, public and government for buildings and structures - schools, universities, hospitals, clinics, churches, homes for the aged, blind, deaf and dumb, government office and administration buildings, law enforcement, etc.

CANSIM

CANSIM is the name given to Statistics Canada's computerized data base. It is often termed a general purpose data bank offering a detailed and conceptually compatible set of aggregate data pertaining to a large number of interrelated fields. CANSIM contains over 360,000 timeseries of socio-economic information. An example of a timeseries would be the annual population of Edmonton for a twenty-year period.

The Alberta Bureau of Statistics maintains approximately 6300 timeseries on CANSIM of Alberta specific data at both the provincial and sub-provincial level.

The majority of information contained in this publication is available on CANSIM. For your convenience we have provided CANSIM matrix numbers at the bottom of most tables.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI) is a price index which measures the percentage change through time, of a constant quantity and quality of goods and services purchased by a representative Canadian urban family in a specified time period. The CPI for each city measures price changes from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities, or between cities and Canada. The CPI is not a measure of true inflationary-deflationary trends. The inference of using the CPI as a measure of true inflation or deflation is incorrect. The CPI only measures percentage changes of a "basket" of commodities - not all items which contribute to inflation or deflation are included.

Effective Jan-85, the CPI will be compiled using updated weights obtained from the 1982 Family Expenditure Survey (replacing weights from the 1978 Survey). This updating procedure is done to more accurately reflect in a timely and relevant fashion, the patterns of urban consumer spending behavior.

The CPI Percent Change is calculated by first subtracting the current period index from the previous period index and then dividing this index point difference by the previous period index and finally multiplying the result by one hundred.

DEPLANED

Traffic (passengers, mail and cargo) which lands and disembarks at an airport.

DWELLING COMPLETION

Dwelling completion is the stage at which all the proposed construction work on a dwelling unit has been performed.

DWELLING START

A dwelling start is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

DWELLING UNITS

Please note, the following definitions are applicable only to data from the Survey of Starts and Completions.

1) Single Detached

This is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

2) Semi-Detached

This category includes each one of two dwellings separated by a common wall extending from ground to roof, or by a garage.

3) Row

This comprises only single attached houses in a row of three or more dwellings. Row-duplexes are not included in this category.

4) Apartment and Other

This category includes dwelling units such as:

- duplexes
- double duplexes
- triplexes
- row-duplexes
- apartments as commonly known
- dwellings over, or at the back of, a store or other non-residential structure.

EMPLOYED

The employed labour force includes all persons who during the reference week:

- 1) did any work at all
- 2) had a job but were not at work due to:
 - own illness or disability
 - personal or family responsibilities
 - bad weather
 - labour dispute
 - vacation
 - other reason not specified above.

EMPLOYMENT/POPULATION RATIO

The employment/population ratio represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment/population ratio for a particular group (age, sex, marital status, etc.) is the number employed in that group expressed as a percentage of the population for that group.

ENPLANED

Traffic (passengers, mail and cargo) which embarks and takes off from an airport.

EXTERNAL TRADE

External trade statistics are compiled from administrative documents collected by Revenue Canada, Customs and Excise. Trade statistics for electricity and exports of crude petroleum and natural gas are collected by the Manufacturing and Primary Industries Division of Statistics Canada. Exports and imports are recorded at values which reflect the actual selling price. Non-trade transactions such as private donations and gifts, settlers' effects and tourist purchases are excluded in the trade statistics.

Domestic Exports - include goods grown, extracted or manufactured in Alberta (including goods of foreign origin which have been materially transformed in Alberta). Prior to 1984, provincial export data was based upon province of lading, indicating where the goods were first laden aboard a carrier for export. Commencing with 1984 data, provincial export statistics are reported on a province of origin basis, that is, the province in which the good were grown, extracted or manufactured.

Imports - import data by province of clearance indicates the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse. This may not always coincide with the province in which the goods are consumed or enter the productive process.

FARM CASH RECEIPTS

Farm cash receipts include the cash returns from the sale of all agricultural products except those associated with direct inter-farm intraprovincial transfers. Other components included are Wheat Board payments, cash advances on farm-stored crops, deferred grain receipts in Western Canada, Agriculture Stabilization Act deficiency payments, Western Grain Stabilization Act payments, and provincial income stabilization payments.

GROSS DOMESTIC PRODUCT AT FACTOR COST

Gross Domestic Product (GDP) at Factor Cost is a measure of income accruing to the factors of production (land, labour and capital). It does not include income that accrues to the non-factor or invisible components of GDP (see Gross Domestic Product at Market Prices). Thus GDP at Factor Cost is derived from GDP at Market Prices by subtracting Indirect Taxes less Subsidies, plus Residual.

GROSS DOMESTIC PRODUCT AT MARKET PRICES

Gross Domestic Product (GDP) at Market Prices refers to the total value of production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. Total production measures are based upon the earnings of the factors of production (Factor Cost) plus the non-factor costs of production (Indirect Taxes less Subsidies). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments.

GROSS DOMESTIC PRODUCT IN CONSTANT DOLLARS

Gross Domestic Product (GDP) in Constant Dollars is a measure of total production during a given time frame and a given geographical location which is valued in prices for some base year. For Alberta, the base year used is 1971.

LABOUR FORCE

The labour force is composed of that portion of the civilian non-institutional population fifteen years of age and over who, during the reference week were employed or unemployed.

LABOUR INCOME

Labour income, comprising wages and salaries and supplementary labour income, is defined as all compensation paid to employees residing in Canada. Supplementary labour income, which is defined as payments made by employers for the future benefit of their employees, comprises employers' contributions to employee welfare and pension funds, workmen's compensation funds and unemployment insurance.

MIGRATION

Migration is defined as a permanent change of residence from one geographical unit to another.

NET MIGRATION

Net migration is the difference between in-migration and out-migration for a geographical unit.

NEW HOUSING PRICE INDEX

The new housing price index measures changes in selling prices of new houses constructed by large and medium volume builders in metropolitan areas. The houses sampled are representative of the total being sold at that time but adjustments are made for changes in physical characteristics to arrive at pure price change. Prices used are the selling prices agreed upon between builder and buyer at the time of signing the contract. Prices relate to mid-month. The composite index includes the house and the serviced lot on which it stands.

NEWLY COMPLETED UNOCCUPIED DWELLINGS

Newly completed unoccupied dwellings are those which are not sold or rented at the time the dwellings are reported as completed in the Survey of Starts and Completions. The units are surveyed every month until they are sold or rented.

NOT IN THE LABOUR FORCE

Persons Not in the Labour Force are that portion of the civilian non-institutional population fifteen years of age and over who, during the reference week were neither employed nor unemployed.

PARTICIPATION RATE

The participation rate represents the labour force as a percentage of the population fifteen years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

PERSONAL DISPOSABLE INCOME

Personal Disposable Income consists of total personal income less personal direct taxes and other current transfers to government from persons.

PERSONAL INCOME

Personal Income includes all forms of income received by persons and unincorporated businesses:

- 1) wages, salaries and supplementary labour income
- 2) military pay and allowances
- 3) net income of non-farm businesses including rent
- 4) net income of farm operators from farm production
- 5) interest, dividends and miscellaneous investment income
- 6) transfer payment income from the government, from corporations and from non-residents.

PLACE-TO-PLACE PRICE INDEXES

A Place-to-Place Price Index, or Spatial Price Index, should not be confused with the Consumer Price Index (CPI). Place-to-Place Price Indexes indicate price differences of a standard basket of goods and services between a community and a base location utilizing a specified reference period. In this case it is June, 1984. The indexes of the base location are standardized to 100 to enable these comparisons.

The table presented in this publication represents price comparisons of Edmonton with each of the other nineteen communities. A different set of intercommunity price comparisons are available from the source publication "Place-to-Place Price Comparisons for Selected Alberta Communities, 1984."

POPULATION PROJECTION SERIES

The population projections presented in this publication incorporate recent declines in migration and a slight increase in fertility rates. Estimated fertility rates for 1983 are used as the fertility assumption (2.006 per 1,000 women aged 15-49 years) and life table survival ratios for 1981 are used as the mortality assumption. Each series employs a different migration assumption as follows:

- Series A - Low Migration
- Series B - Medium Migration
- Series C - High Migration

PRIME RATE

The Chartered Banks' Rate on Prime Business Loans is the rate charged to the most credit-worthy borrowers. The rate shown is of the last Wednesday of the month. When there are differences in the rate charged by individual banks, the most typical rate or rates are taken.

PRIVATE AND PUBLIC INVESTMENT

Private and Public Investment consists of total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing. Capital expenditures include the cost of procuring, constructing and installing new durable plant and machinery, whether for replacement of worn or obsolete assets, or as net additions to existing assets. Repair expenditures represent the non-capitalized outlays made to maintain the operating efficiency of the existing stock of durable physical assets.

RETAIL TRADE

Retail trade is defined as the aggregate sales made through retail locations (outlets). Retail trade estimates do not include any form of direct selling which bypasses the retail store, for example: direct door to door selling; sales made through automatic vending machines; sales of newspapers or magazines sold directly by printers or publishers; and sales made by book and record clubs. Retail trade excludes: retail sales through ancillary units, for example, warehouses, head offices, etc.; sales of contractors whose major activity is not retailing; and retail transactions between individuals.

SEASONAL ADJUSTMENT

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally-adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, crop cycles, holidays and vacation periods, grain receipts in Western Canada, deficiency payments made by provincial governments and the agricultural stabilization board and provincial income stabilization payments.

TAXATION STATISTICS

Taxation Statistics are based on individuals that have filed tax returns with Revenue Canada, Taxation. Allocation of income is on the basis of the taxfiler's address at the time of filing. These figures should not be used to arrive at a per capita personal income figure for the province or sub-provincial areas for the following reasons:

- 1) Some individuals (e.g. students) who have earned small amounts of income during a year may not file a return with Revenue Canada, Taxation.
- 2) Some taxfilers may not report all income received, i.e., understate their income.
- 3) Imputed income is not included in taxation statistics, e.g. free room and board, clothing, etc. provided to employees.

TYPICAL MORTGAGE RATE

The typical mortgage rate is the rate charged by chartered banks on either 1 year or 5 year residential mortgages. Monthly data refer to the last Wednesday of the month.

UNEMPLOYED

The unemployed includes those persons who during the reference week:

- 1) were without work, had actively looked for work in the past four weeks (ending with reference week) and were available for work.
- 2) had not actively looked for work in the past four weeks but had been on layoff for twenty-six weeks or less and were available for work.
- 3) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from reference week, and were available for work.

UNEMPLOYMENT RATE

The unemployment rate represents the number of unemployed persons as a percent of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the unemployment in that group expressed as a percent of the labour force for that group.

VALUE OF CONSTRUCTION WORK PURCHASED

The Value of Construction Work Purchased consists of the total value of output of both the construction industry and construction labour forces in other industries. Also included are related construction costs which are accumulated during the creation of a structure. Examples include pre-construction planning and design, management, legal and real estate fees, interest during construction, etc.

VALUE OF MANUFACTURING SHIPMENTS

Value of manufacturing shipments is defined as the gross value of goods produced from its own materials by the reporting establishment, or for its account. Value is net of discounts, returns and allowances, sales tax, excise taxes and duties, returnable containers and common or contract carriers' charges for outward transportation (but not of own carriers' delivery expense). Shipment values in this publication are monthly projections of annual census of manufacturers' values based on returns from a stratified systematic sample of manufacturing establishments.
